

BANKS COUNTY WATER SYSTEM

150 HUDSON RIDGE • SUITE 5 • HOMER, GEORGIA 30547

To whom it may concern,

I am very willing to give a reference for Griffin Brothers Inc. They have always performed at the highest level of expertise. We have called upon them to perform all types of jobs for us over the past 18 years. Some of these jobs include running over 300 miles of water lines here in Banks County from 2 inch to 12 inch including valves, PRV vaults, and fire hydrants. They expanded our wastewater spray field at the Racetrack Wastewater Facility increasing the capacity from 60,000 to 270,000 gallons per day. They have been called upon many times to repair lift station pumps and free clog sanitary sewer lines. They are always highly professional in all things they do. We use them as an emergency contact all the time and they have never failed to respond and completed all tasks quickly. At this time we are using them on two projects here on the wastewater system, these include installing 6 new aerators in our ponds and installing a new force main between two lift stations. As Banks County's Utility Director I am glad to endorse Griffin Brothers Inc.

STEVE REECE

BANKS COUNTY UTILITY DIRECTOR
